No active medications recorded			
Historical	SIG	START/STOP	ASSOCIATED DX
No historical medications recorded			

Past medical history

No past medical history available for this patient.

Health concern note

Low weight percentile (~3rd percentile) with risk for poor weight gain
Feeding intolerance and decreased intake
Suspected gastroesophageal reflux impacting feeding and comfort
Excessive crying and colic affecting sleep and feeding patterns
Risk for dehydration due to inconsistent intake
Caregiver stress related to infant care demands

Active health concerns

DESCRIPTION	EFFECTIVE DATE
No active health concerns recorded	

Inactive health concerns	
DESCRIPTION	EFFECTIVE DATE
No inactive health concerns recorded	

Subjective
43-day-old female, born at 42 weeks via cesarean section, presents with caregiver-reported concerns of persistent colic, feeding intolerance, gas, constipation, and irritability. Infant demonstrates frequent crying episodes, particularly following feeds, associated with abdominal discomfort and restlessness. Feeding described as inconsistent with occasional decreased intake and prolonged feeding sessions. Sleep is disrupted due to irritability. Caregiver also reports mild nasal congestion contributing to feeding difficulty. No fever reported. No cyanosis, apnea, or projectile vomiting reported. Infant producing wet diapers; however, caregiver concerned about adequacy of intake and hydration status.
Objective

PHYSICAL EXAM

General: Awake, intermittently irritable, consolable, small for age
Vital Signs: Temperature 98.4°F (within normal limits), other vitals stable
HEENT: Anterior fontanelle soft and flat, mild nasal congestion
Cardiac: Regular rate and rhythm, no murmurs
Respiratory: Clear to auscultation bilaterally, no retractions
Abdomen: Soft, mildly distended, active bowel sounds, mild discomfort on palpation
Neurological: Normal tone, moves all extremities spontaneously
Skin: Warm, intact

GROWTH PARAMETERS

- Weight: 2.7 kg (~3rd percentile)
- length: 49 cm
- Head Circumference: 31.54 cm

Assessment
Feeding difficulties in newborn – R63.3 Gastroesophageal reflux disease – K21.9 Infantile colic – R10.83 Sleep disturbance – G47.9 Excessive crying of infant – R45.83 Nasal congestion – R09.81

Plan
Continue breastfeeding/formula every 2–3 hours. Smaller, more frequent feeds recommended. Maintain upright positioning during and after feeds with frequent burping. Abdominal massage and bicycle leg exercises encouraged. Simethicone PRN. Reflux precautions reviewed including avoiding overfeeding and maintaining upright positioning after feeds. Saline drops with suction PRN for nasal congestion. Monitor feeding intake, wet diapers (?6/day), stool pattern, and weight gain.

Orders

LAB ORDERS

No orders attached to this encounter.

IMAGING ORDERS

No orders attached to this encounter.

Screenings/ Interventions/ Assessments

No screenings/interventions/assessments recorded.

Observations

No observations recorded.

Care plan

CHHA Skilled Nursing for feeding monitoring, weight checks, hydration assessment, GERD monitoring, and caregiver education.
CHHA Home Health Aide for feeding support, diaper monitoring, daily care, and caregiver assistance.

CAREGIVER EDUCATION

Feeding techniques, reflux precautions, colic management, signs of dehydration, safe sleep practices, and infection prevention reviewed. Caregiver verbalized understanding.
